this book provides a comprehensive exploration of generalization in deep learning focusing on both theoretical foundations and practical strategies it delves deeply into how machine learning models particularly deep neural networks achieve robust performance on unseen data key topics include balancing model complexity addressing overfitting and underfitting and understanding modern phenomena such as the double descent curve and implicit regularization the book offers a holistic perspective by addressing the four critical components of model training data model architecture objective functions and optimization processes it combines mathematical rigor with hands on guidance introducing practical implementation techniques using pytorch to bridge the gap between theory and real world applications for instance the book highlights how regularized deep learning models not only achieve better predictive performance but also assume a more compact and efficient parameter space structured to accommodate a progressive learning curve the content spans foundational concepts like statistical learning theory to advanced topics like neural tangent kernels and overparameterization paradoxes by synthesizing classical and modern views of generalization the book equips readers to develop a nuanced understanding of key concepts while mastering practical applications for academics the book serves as a definitive resource to solidify theoretical knowledge and explore cutting edge research directions for industry professionals it provides actionable insights to enhance model performance systematically whether you re a beginner seeking foundational understanding or a practitioner exploring advanced methodologies this book offers an indispensable guide to achieving robust generalization in deep learning

this book adopts an interdisciplinary approach to investigate the development of mathematical reasoning in both children and adults and to show how understanding the learner s cognitive processes can help teachers develop better strategies to teach mathematics this contributed volume departs from the interdisciplinary field of psychology of mathematics education and brings together contributions by researchers from different fields and disciplines such as cognitive psychology neuroscience and mathematics education the chapters are presented in the light of the three instances that permeate the entire book the learner the teacher and the teaching and learning process some of the chapters analyse the didactic challenges that teachers face in the classroom such as how to interpret students reasoning the use of digital technologies and their knowledge about mathematics other chapters examine students opinions about mathematics and others analyse the ways in which students solve situations that involve basic and complex mathematical concepts the approaches adopted in the description and interpretation of the data obtained in the studies documented in this book point out the limits the development and the possibilities of students thinking and present didactic and cognitive perspectives to the learning scenarios in different school settings mathematical reasoning of children and adults teaching and learning from an interdisciplinary perspective will be a valuable

resource for both mathematics teachers and researchers studying the development of mathematical reasoning in different fields such as mathematics education educational psychology cognitive psychology and developmental psychology
